

## General

Item no.:	2187116014
Material recipe no.:	7915
Recyclable:	YES - 100% RECYCLABLE
NIR detectable:	Yes
Related lids:	-
Shape:	Rectangular
Colour:	Clear
Material:	MAPET II
Diameter (mm):	
Length (mm):	187,30
Width (mm):	137,10
Depth (mm):	40,00
Volume (ml):	680,00
Compartments:	1
Volume per compartment (ml):	-
Application:	Fresh meat
Cooking:	Not ovenable
EAN:	-
Restrictions:	Yes

## Embossing

Customer logo:	AH
Cavity no.:	Yes
Depth indicated:	No
Green Dot:	No
Glass and Fork:	Yes
Recycling Arrows:	Yes
Faerch Logo:	WWW.FAERCHPLAST.COM

## Technical information

Min. temp:	-40
Max. temp:	40
Absorber inlay:	No
Nominal sheet thickness, my ( $\mu$ ):	600
Weight:	20,31
Tolerance weight:	+/- 10%
Tolerance diameter (+/- mm):	0,60
Tolerance length (+/- mm):	0,60
Tolerance width (+/- mm):	0,60
Tolerance depth (+/- mm):	0,60
Tolerance centre (+/- mm):	0,70
Cubic metres per 1000 units:	0,29
Perforations:	No
Handles:	No

## Packaging

Packaging:	Gitter box
Weight per Pack, kg:	141,80
Net weight per Pack, kg:	85,80
Units per bag:	4224
Layers per pallet:	-
Cartons per layer:	-
Cartons per pallet:	1,00
Total units per pallet:	4224
Pallet type:	-
Pallet Height, mm:	1268,00
Packaging Length, mm:	1216,00
Packaging Width, mm:	806,00
Packaging Height, mm:	1268,00
Packaging Volume, m3:	1,243

## Absorber pad

Name:	-
Length (mm):	-
Width (mm):	-
Absorbency per m2 (ml):	-
Absorbency for one pad (ml):	-
Top layer colour:	-
Bottom layer colour:	-
Weight (gr):	-
Other specifications:	-

## Food contact statements

Faerch Plast products comply with EU-directives

Additional assortment items comply with EU-directives. Documents of Compliance can be downloaded from our website

## Packaging

### *Carton*

- All trays are placed within a plastic liner before they are packed into a carton
- Each liner is provided with date of production for traceability
- The number of trays per carton may vary +/- 2%. However this should be equalized over the total order
- Cartons are labelled with the temperature parameters for the trays
- All pallets are shrink wrapped and effectively protected
- Cartons are packed on 1200 x 800 mm pallets

### *Liners and pallets*

- All trays are packed in liners on pallets
- Each liner is provided with date of production for traceability
- The number of trays per pallet may vary +/- 2%. However this should be equalized over the total order
- The liners do not overhang the pallet.
- All pallets are shrink wrapped and effectively protected.

### *Scantainer*

- A liner in the scantainer protects all trays
- Each scantainer is provided with date of production for traceability.
- The number of trays per scantainer may vary +/- 2%. However this should be equalized over the total order
- All scantainers are labelled with the temperature parameters for the trays
- The scantainer does not overhang the pallet
- All scantainers are wrapped and efficiently protected

### *Metal cage*

- A liner in the metal cage protects all the trays
- Each metal cage is provided with date of production for traceability
- The number of trays per metal cage may vary +/- 2%. However this should be equalized over the total order
- The size of the metal cage is 1216 x 806 x 1165 mm
- All metal cages are shrink wrapped and effectively protected

## Corporate Social Responsibility (CSR)

We have worked to define our overall ambitions and goals for operating as a socially responsible company. We have defined five particularly relevant areas that form the core of our social responsibility

- Use of recycled plastic
- Food safety
- Ethics and integrity
- Employees
- Working environment

## Recycled Raw Materials

All APET/MAPET® packaging contains rPET behind a functional barrier and all CPET packaging contains rPET behind a functional barrier. All raw materials used, including recycled ones, are certified suitable for food contact packaging. Faerch Plast complies with regulations about functional barriers, where national regulation legislates accordingly on the use of recycled plastic

## Storage

The impact strength of all plastic material markedly increases at higher temperatures. We have material specific recommendations to storage temperatures before mechanical handling that are to be found in our Technical datasheets for PP, CPET, AMPET®, PS, APET and MAPET®

## Recycled PET in Food Packaging

### Post-Consumer

PET material is called Post-Consumer (PCR) if it has been in the hands of consumers, has reached the end of its use and is perceived as waste. Post-consumer PET is collected from deposit systems, curbside collection and closed-loop systems. It is sorted and mechanically recycled into food grade recycled PET (rPET) for use in new food packaging.

Food grade rPET has been made from used bottles for many years, and with its recycling facility in the Netherlands, Faerch can also recycle used trays into new food packaging at an industrial scale.

### Post-Industrial

PET material is called Post-Industrial (PI or "preconsumer") if it consists of unused products (e.g. manufacturing errors), production offcuts or process scrap supplied from a third party producer, who cannot recycle or re-use it and therefore perceives it as waste. Post-Industrial PET can, for example, come from skeleton waste from a form-fill-seal process or waste from production of bottles (scrapped preforms/bottles/errors). However, to qualify as Post-Industrial, the material must be purchased externally and delivered by a third party.

### Virgin Content

In offcuts and scrap that contain virgin material generated from a manufacturer's own production process that is grinded and used again in its products, it is important to split the fractions of virgin, PI and PCR up when looking at recycled content. Virgin content should never be classified as recycled content but as virgin material.

### Recycled content

Faerch strongly recommends the application of the most ambitious definition when referring to recycled content in food packaging. Packaging producers should make best use of Post-Industrial content, and offcuts and scrap containing virgin material from their own production processes should be used. However, virgin scrap and virgin offcuts from internal production should not be classified as recycled content. Only those materials that have been in use by consumers and that have been recycled (post-consumer content) should qualify and be referred to as post-consumer recycled content both as direct input or as re-grind.

In circumstances where it provides an environmental benefit to utilize a third party's post-industrial waste fraction, this will be perceived as part of the rPET percentage.

### Post-consumer recycled content

Faerch will on a mass-balance level have more than 70% post-consumer recycled content (PCR) in the total consumption in the PET production. APET, MAPET® II and CPET products from Faerch, are made with multiple recipes with different shares of post-consumer content:

#### APET:

APET Standard 82% PCR  
 APET Heat Seal 82% PCR  
 MAPET® I 82% PCR  
 APET Matt 86,2% PCR  
 MAPET® II 85,7% PCR  
 MAPET® II (100%) 99,3% PCR  
 Heat Seal (100%) 99,3% PCR  
 APET Anti mist (100%) 99,3% PCR

#### CPET:

CPET Standard\* 69-75% PCR  
 CPET Frost\*\* 64-70% PCR

In circumstances where it provides an environmental benefit to utilize a third party's post-industrial waste fraction, Faerch will substitute up to approximately 10% on circular economic grounds. Faerch will never include internal virgin scrap as part of the post-consumer and post-industrial percentage.

For further information on recycled PET in Food Packaging please consult our detailed statement at our website which will be regularly updated.

\*Dual colour applications will have a lower rPET percentage due to the complexity of the structure.

\*\*Never containing PI
